DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 and 5-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Herron et al.

Herron et al. teaches making a radio-conductive inorganic/organic composite film, including a BiI_3 /nylon composite, where the film can be formed by applying the film onto a substrate and heat pressing, where the heating is disclosed to be on the order of 50-150 °C (Col. 4, line 24-Col. 6, line 11; Examples 3-7).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Herron et al.

Herron et al. is applied here for the same reasons as given above. Herron et al. does not teach the amount of pressure applied to the film during the heat pressing. However, one of

ordinary skill in the art would have recognized that the amount of pressure applied during a heat pressing treatment is a cause effective variable, as the amount of pressure effects the compaction of the composite film. It is considered obvious to one having ordinary skill in the art to have determined the optimum value of a cause variable, such as pressure, through routine experimentation in the absence of a showing of a criticality in the claimed pressure (*In re Woodruff* 16 USPQ 2d 1934, 1936). Therefore, it is the examiner's position that the claimed pressure would have been obvious to one skilled in the art practicing Herron et al., with the expectation of providing the desired composite film formation, such pressure being determined through routine experimentation.
